

# Assignment No. 13

## Create a workmail for your organization

1. Visit [aws.amazon.com](https://aws.amazon.com) and Sign in. Click on the search field and type "workmail" in the search field and select Amazon WorkMail. Click on "Create organization"

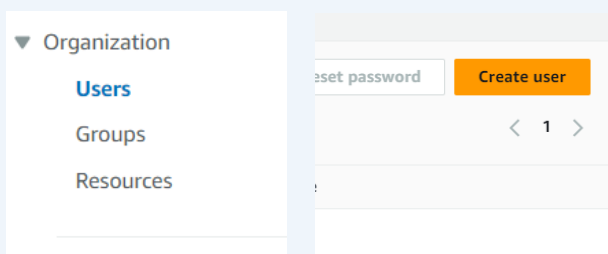

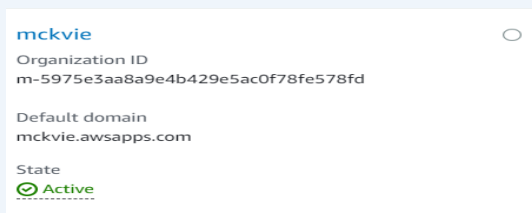

2. Select "Free test domain" in the organization settings and click on "Create organization"

### Create an Amazon WorkMail organization

Create an Amazon WorkMail organization to provide email addresses to groups of users in your company. The email addresses include the domains that you select for your organization.

A screenshot of the 'Organization settings' form. It has a section for 'Email domain' with three radio button options: 'Existing Route 53 domain', 'New Route 53 domain', and 'Free test domain' (which is selected). Below this is an 'Alias' field with the text 'mckvie'. At the bottom right, there are two buttons: 'Cancel' and 'Create organization'.

3. Click on the organization which was just created. On the left panel select users and then click on "Create user"

4. Setup the user email and click on "Create user"

A screenshot of the 'User details' and 'Email setup' forms. The 'User details' section includes fields for 'User name' (filled with 'User1'), 'First name - optional' (filled with 'User'), 'Last name - optional' (filled with '1'), and 'Display name' (filled with 'User1'). The 'Email setup' section includes an 'Email address' field (filled with 'user1@ mckvie.awsapps.com') and a 'Password' field (filled with '\*\*\*\*\*'). At the bottom right, there are two buttons: 'Cancel' and 'Create user'.

6. Create two such users. Go back to organization dashboard and click on the organization created by you. Now click on the Amazon WorkMail web application link.

Amazon WorkMail > Organizations > mckvie > Users

Users (2) Info	
<input type="text" value="Search users"/>	
<input type="checkbox"/> Display name	User name
<input type="checkbox"/> User1	User1
<input type="checkbox"/> User2	User2

Amazon WorkMail web application  
<https://mckvie.awsapps.com/mail>

7. Login to the amazon workmail by any of the user of your organization's workmail

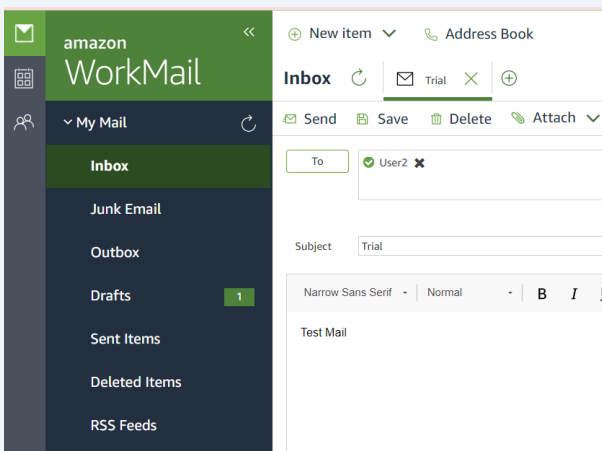

Please log in with your mckvie credentials

Username (not email address)

☐ Remember username

Password

7. Send an email from one user account of the organization to the another.

8. Check if the email is received by the other user of the same organization.

Hence organization's workmail is setup successfully.
